

New StealthChat with Encrypted Voice Messages

The New StealthChat 1.5 Release Takes Your Privacy to the Next Level with Encrypted Voice Messages and Fingerprint-Enabled Encrypted Screen Lock

Silicon Valley, CA – June 4th, 2017 – Today, Rockliffe Systems launches a new version of StealthChat into the global market. The new version of StealthChat delivers two new features that reinforce the security and privacy of the product: Voice messages and encrypted screen lock with fingerprint and TouchID. These new features reinforce the security and privacy features of the product that include end-to-end encrypted VoIP calls, encrypted group chats and self-destructing messages.

Encrypted Voice Messages

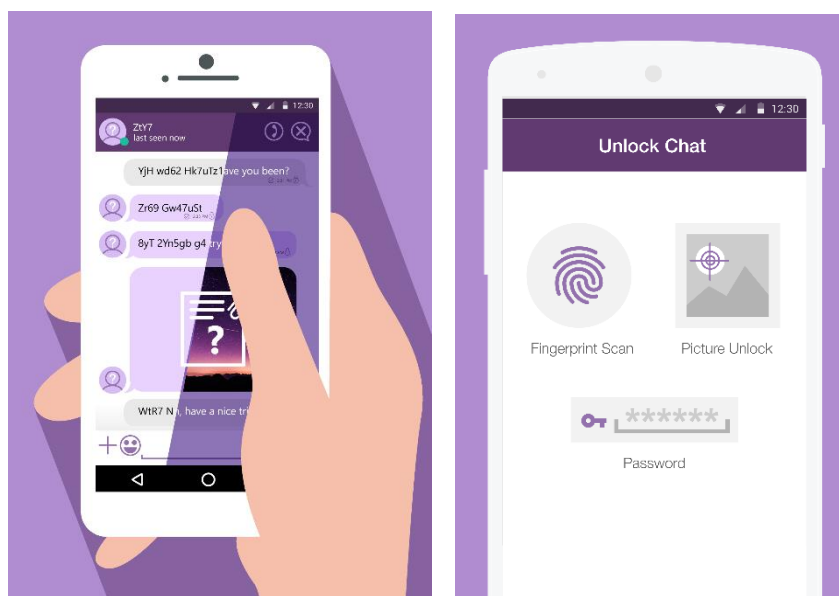

The new version of StealthChat allows users to quickly and easily send voice messages to each other and to groups. As with all of the other communication in the product, the Voice Messages are encrypted using StealthChat's powerful end-to-end encryption technology.

In line with the design goals of StealthChat that combines high security with ease of use, the user can simply tap and hold on the icon and record a voice message up to 1 minute. Voice Messages function with the burn timer so the user can send a voice message that self-destructs after a set period of time.

Encrypted Screen Lock

The earlier versions of StealthChat provided for an encrypted screen lock. The user can set this feature to scramble the content of the StealthChat messages displayed on the screen. This feature is great for prevent “shoulder surfers” - friends or strangers that like to peek and snoop at your messages over your shoulder. The new version of StealthChat allows users to unlock the encrypted screen using fingerprint scanners and touch-id on devices with that feature. This makes it even easier to use the encrypted screen lock.

Enterprise-grade Privacy and Security

StealthChat is ideal for those professionals that value privacy and security. StealthChat is great for professionals such as CEO's, corporate executives, politicians, government employees, police and military personnel.
